Dragon User is not an endorsement of  
Dragon Data Ltd.

Please see editorial article.

The quality of the material we can publish is  
decreasing from month to month. It is very  
difficult, if not impossible, to judge the quality of the  
discussions that you can make with your  
Dragon. The Dragon computer may be unique  
in the market, but it is a potential success or  
failure. Did we get it right? That's the question.

Articles which are submitted to Dragon  
User for publication must be no more than  
2000 words long. All submissions must be  
typed. Please leave wide margins and a  
double space between successive paragraphs.  
Please indicate position. We cannot  
promise to print what you write, but it is  
assured by a host of the program.

We cannot guarantee to return every  
submitted article or program so please send  
a copy. If you wish to have your program  
printed you must include a stamp  
and postage envelope.

## Editorial

HOW ARE THE mighty fallen? Acer, once the darling of the Unlisted Securities Market, has been forced to restructure itself with financial aid from Italian giant Olivetti. Computer UK has halved the price of its new Page-A Writing and painted company with its general manager Howard Stanworth. Sean Sinclair has cut back on production and postponed the US launch of the GL.

Not to this phenomenon confined to the UK. Bond, once described as the "Japanese Apple", has been in discussions with Toshiba about possible investment. This follows a sharp drop in profit last year and a reduction in market share to little more than four per cent.

The micros market can fairly be described as "jittery" at the moment. The boom years of 1980-81 are over and no one is quite sure how big the market will be in future. That, in turn, has had a knock-on effect among book and software publishers.

Oregon users, of course, are quite familiar with this situation having experienced the troubles associated with Dragon Data's demise. Thus, they are well placed to advise their fellow micro owners that oil is not "drown and gloom". Any machine which establishes a large user base will continue to be served by software and peripherals for some time, even if the manufacturer ceases to exist.

Hopefully, once excess production capacity has been shed, the market will settle down again. The question occupying most people's minds at the moment is just how much capacity is excess — no one is taking any bets on the answer.

## Son et lumiere

I AM writing with reference to the Sound-to-Light program by Robert Strange published in Dragon User in January. This program can be employed by entering the following lines:

```
100 C 100
101 D 100000
102 E C 0747677-17
103 F C 0747677-17
104 G C 0747677-17
105 H C 0747677-17
106 I C 0747677-17
107 J C 0747677-17
108 K C 0747677-17
109 L C 0747677-17
110 M C 0747677-17
111 N C 0747677-17
112 O C 0747677-17
113 P C 0747677-17
114 Q C 0747677-17
115 R C 0747677-17
116 S C 0747677-17
117 T C 0747677-17
118 U C 0747677-17
119 V C 0747677-17
120 W C 0747677-17
121 X C 0747677-17
122 Y C 0747677-17
123 Z C 0747677-17
```

The program will now respond, much longer than the changes in pitch in the usual.

## Avoid the SAM sting

I RECENTLY had the misfortune to buy the BBC SAM chip in my Dragon. The chips were off-the-shelf, and a certain lot of characters remain unselected by inserting a cartridge resulting in hitting the keyboard.

Attempts to buy the same conductor from my local dealers proved fruitless. All the dealers in all electronics magazines also listed no stock of this item. Eventually I found two electronics students who carried this chip. The sting was the price of £10.62.

An advertisement in an American magazine showed that it could obtain one chipper in Silicon Valley. A Visa order placed on an After Eight phone call to DORAY Computer Products in Santa Clara, Los Angeles, and two days later the chip was delivered to my home for a total sum of £10 plus postage. What a saving!

## Readers' poll plea

I enclose a copy of what became your software Top 10 in colour used by the best games for the Dragon (includes Tom Upton's Contest by Project Blue Sheep by Imperial and Return of the King by Mastersoft). They never seem reg-

This is the character of your letters -- send your tips, compliments and complaints to Letters, Dragon User, 1203 Littleport Street, London WC1H 9PA.

ated in this chart which I should imagine is based on shop point! Will you try getting a new Dragon game in any shops??

Surely a better way would be to run a readers poll in Popular Computing Weekly then. I am sure these great games would attain their rightful position at the top of the Dragon charts.

By Alan  
37 Cheltenham Road  
Paulton  
Somerset BA2 7HG

**TOP 10 charts and their accuracy or lack of, have long been a subject of debate. But it is true that many shops have shown a marked reluctance to stock new Dragon software following Dragon Datafile's decision. We would be very interested to know what other readers think about the idea of a readers poll.**

## Sheffield shuffle

I THOUGHT I ought to write to point a reader given in a recent issue of Dragon User it concerns the Sheffield Dragon User group. Your last Dragon Clublist showed us the C64 user group of Huddersfield.

I have had a number of calls concerning C64s (which have been unhelpful, since I usually use DOS myself) but the club does not specialize in C64s. One of the calls was of interest however since the gentleman concerned was asking to answer further questions regarding C64s. His details are as follows:

Alan Aspinwall  
8 Harry Avenue  
Heathfield, East Sussex

I would be grateful if you could update the club details -- we have met every 4th Saturday (City Polytechnic, Young Men's Club) on the last Monday of each month. Incidentally you may be interested to know that I have had enquiries from places such as Ireland and Denmark! Your magazine certainly gets abroad.

## Americans & Dragons

THIS IS A note from an unlabelled member of Dragon owners in the USA. We have been left with no peripheral or software support after the Timex Corporation absolutely failed to crack the non-copyrighted American market place.

Any articles aimed at US readers would be most appreciated. In particular we need information on foreign mail order providers and on the possibility of purchasing Commodore disk drives and controllers. Any personal information and advice that your readers would be most welcome.

## Flex

RE GO FLEX by Steve Dodge — Dragon User February — this article was under in that I was impressed a personal preference for OS9 when some readers have said an unquestioned recommendation the tactical combination of OS9 and FLEX facilities were unable to justify the expense. Some of our customers, who have bought and used both systems, were not impressed of such a shadow review. I note that a recent review by Radio West came down firmly in favour of FLEX and OS9.

I feel that you Dragon users a more detailed comparison of the two competing systems. Both have their merits and are well worth examining in detail. It is a tribute to the power and reliability of the 6502 processor that two such excellent operating systems are available.

Steve Dryden  
Compuserve

# If you're into program writing....

## Get this into an envelope

If the programs you are writing involve sophisticated graphics, you have two choices: a severe headache or Touchmaster.

Obviously you'll want to consider the latter, so in the mean time send away for your free Touchmaster literature and find out more about the best value/performance graphics tablet available... or take two painkillers.

**TOUCHMASTER**

# 6809 Show

THE SECOND 6809 Computer Show by Dragon and Tandy users will be held at London's Royal Horticultural Hall on March 30 and 31. Exhibitors will include Tandy, Microdata, Compusense, Design Dragon, Decay and Volkstone.

A new model for the Commodore will be launched by Design Dragon. The Commodore machine needs basic rates from \$80 to £1200 and will cost around £50. The price of the accompanying software has not yet been fixed.

Dragon user will be exhibi-

ting on stand No 45-46. There will be a wide selection of current and past issues of the magazine on display together with a number of Dragon books from Sunshine all 10s plus the public.

Admission to the show which will be open from 10 am to 6 pm will cost £2 for adults and £1 for children under 12. Further information is available from the show organisers, Computer Messeplatz (UK) Ltd, 20 Orange Street, London, Tel: 01-531-9521.

LIVE Demonstration of the 6809 — Photo: D. Clegg

## Jet Set Dragon

IF YOU have ever tried to climb the Gitanes Tree, get under the Security Guard or perform a Quadrille, then the chances are that you have played Jet Set Holly in a Soundbite New Software Project in handling and set up the Dragon.

Jet Set Holly is the second by Soundbite, after again, the love the adventures of Miss Holly. This game is set in Miss Holly's basement and there are some 60 locations to explore each with their own hazards and hidden surprises. Watch out for guards on the battlements and the entrance to Hades.

Soundbite Soundbite is a game which was converted to the Dragon by Roy Collier (softw-CT 88) and is available from Software Projects, Asterton Road, Weston, Liverpool L25 7QR.

## Dragon roars

A SPECIAL synthesis for the Dragon is being released by Mtronix (Mexico).

The Synthesizer synthesiser plugs into the joystick port and is powered from the micro. It has a built-in speaker and will come with two software packages to demonstrate its capa-

bilities. The package will cost £24.95 from J. Johnson (Softw-CT Dept 102088), 4 Hartgate Lane, Tingley West, Yorks, YO5 1JU.

## Compusense imports Dragon 64s

BURGHARD has appointed London based Compusense as its UK Dragon distributor. Compusense is now shipping Dragon 64s and Dragon 64S drives for sale in the UK. Single disk drives will cost around £240 and double disk drives about £460. The price of the Dragon 64 has not been fixed at about £1600. All units include delivery.

Both the Dragon 64 and the disk drives will be on show at the Computer Show at the Royal Horticultural Hall on March 30 and 31.

More information from Compusense, 100-106 Green Lanes, Palmers Green, London N11 3QA.

## New releases

BLISTER Computer games will be showing four new releases at the 6809 Show.

Captain Bowser based on Captain Star-Spangled in various types of Captain and Star Defense, a Defender type game are all £1.99.

The fourth game Aladdin is a version of Odilon and will cost £2.99.

John Gossage, the company's managing director, says that a video display will be running half-time at the show to allow customers to have a look at the programme before buying.

A copy of the demo video has also been sent to Justo Alfonso of Eurocent.

## Mysterious

THE Mysterious Adventure series originally released by Charles et Cie will now be put out by Adventures International, publishers of the Scott Adams range of adventures.

They follow the adventure from the Order House in one of the Mystery Advent series, has been £1.99. All the programming here.

He will be working on Dragon conversions of the entire range — Spectrum will be first followed by a Commodore game.

The Mysterious Adventure games are £1.99.

## Mastertronic

MASTERTRONIC is covering its success at one armed bandit simulation. Vagin Jackpot I for the Dragon will be in the budget range at £1.99 and will appear towards the end of March.

Units inclusive of delivery. Both the Dragon 64 and the disk drives will be on show at the Computer Show at the Royal Horticultural Hall on March 30 and 31.

More information from Compusense, 100-106 Green Lanes, Palmers Green, London N11 3QA.

## Screaming Abdabs

LANCASHIRE BASED AAF Software has just released a new program for the Dragon — Screaming Abdabs. There are 20 complete scenarios with various movement modes, collecting items and other features to prevent you from reaching your goal.

Each screen contains a key which is necessary to access the next level.

This game, which costs £8.95 is available from AAF Software, Unit 8, Cammidge Industrial Estate, Woodhouse Street, East, Rochdale, Lancashire OL16 5LD.

## Incentive Confuzion

THE NEXT Dragon program from Incentive Software will be a version of the arcade game Conquistador 80-90.

Ian Archdeacon, Incentive's managing director, says that Confuzion will be converted as soon as the programme has finished the test Trilogy.

For more details contact Incentive Software, 54 London Street, Reading RG1 4BD.

# COLOSSAL CAVE ADVENTURE

The original classic adventure game for Dragon 32 with disk drive ..... only £9.95

## FLEX

For DRAGON or DBASIC disk systems with Colour and Assembly (£89.95 special price with DYNACALC) £99.95 amazeable and easy-to-use operating system. It is the pre-prepared system for the DRAGON — managing colour, combined with our DBASIC language. Requires DRAGOn with 32k RAM.

- 48k Bytes FREE USER RAM
- 81k by 24k Pixel Screen with true colours, independent refreshable character sets, resolution 16x
- Supports single and double-density for interchange with other FLEX systems
- Includes over 30 standard utilities
- Powerful BASIC Assembler
- Windows Text Editor

## CROSS ASSEMBLERS

## DYNAMISER

DYNAMISER OPTIMISES YOUR  
BASIC PROGRAM BY

- 1. removing redundant bytes and  
characters
- 2. defining an vocabulary ROMS
- 3. combining common items into one line

## DASH/DEMON

An Intersoft DRAGON MACHINE CODE CODE by Ian Gledhill. An easy to use 6502 assembler (DASH) with a powerful machine code monitor (DEMON), useful for beginners and experienced programmers. All you need to write and debug machine code routines.

DRAGON DEMON cartridge	£39.95
DRAGON DEMON DRAGON 32k	£39.95
DRAGON only cartridge	£79.95
DRAGON only cartridge	£79.95

## DBASIC

Disk BASIC for FLEX. Get all the benefits of FLEX, and run existing DRAGOn programs with little or no changes:

- Millions 32k DRAGOn BASIC
- 20 by 24 Screen and 20 by 24 Screen
- Simple Commands to FLEX them BASIC
- Use up to 8 sequential or random access files per program
- DRAGOn BASIC is compatible to standard systems.
- DRAGOn command shows you exactly where BASIC definition errors
- Load/Save programs as FLEX disk files
- Includes 8 example programs

**SEND SAE  
FOR FULL  
PRICE LIST  
AND CATALOGUE**

## EDIT +

EDIT+ is a Full Screen Editor and Programmer's Tool Kit. It is excellent and for writing programs in BASIC and it is nice to see for the novice as well as the experienced programmer. EDIT+ includes all the facilities of the PC-Edit. Up to 20 lines of your program are displayed on the screen and can be changed by overtyping, inserting, deleting characters. Functions include Find, String, Change, Sort, Copy, Find, Goto, Spaced Line, Scroll up/Down, Ascent From Top, and Cross Basic Command. No Dragon is complete without an EDIT+.

Cartridge £34.95
Dragon DOS disk £34.95
Dragon FLEX Disk £71.95

## DYNACALC

Full feature generalised scientific calculator with built-in functions for scientific calculations.

- Run under DRAGOn FLEX with 32k memory expansion.
- 1200 Bytes by 256 Columns
- HDLC Facility
- 10 Day Arithmetic
- Mathematical Functions: Trigonometric, Statistical, Logical and Bit-level Functions built in.
- Windows
- Plot Graphs
- Profit or part of specialised
- Save Load Specs included on disk.
- Define Many Variables: Real, Double
- Various FLEX commands
- Horizontal and Vertical Tables
- Sort

Data saved to location from disk by DYNACALC may be passed to created by other FLEX programs, e.g. RMS, BASIC, PASCAL, COBOL, Fortran

## RMS

### A computer DATABASE MANAGEMENT SYSTEM

Introducing a very easy to learn to use tool for accessing business records management information systems. Customer reports, personalised date entry, stock control and much more. RMS can be readily configured to do many different jobs which require total entry, online data retrieval, update and printing of reports in almost any programming language. An RMS database is stored as standard FLEX, Dragon file and is accessible via a user written programme.

# Artist

**Brian Hinson explains how to turn your keyboard into an artist's palette.**

ARTIST is a program for all that want to sing! You can just choose freely to sing karaoke songs, or you can sing the songs and have fun by creating sketches, set pieces and third scenes, using all the things we have in your Disney

The program starts by clearing all the Dragon 3 font resolution screens. It can begin by asking questions to set up the Phoenix Screen Slave page and colors you want to use. The colors you choose for your background/outline pens must be from those available in the Phoenix you have (refer to page 68 of the manual). Joystick or keyboard control is included. Keyboard control is easiest to use as fine control but graphics are better for speed. Try an experiment for yourself.

You should now have a small glowing dot that you can move around the screen. Press C for control and the computer will beep until waiting for a command. Now press 1 for ink, and the dot will have a tint of your pen's colour. To change colour press C followed by the icon numbers for the colour you want (eg. 4 = red in Prodot).

If you want a line of a difficult angle or to  
join two points you need to enter Bezier  
mode. Position the dot at one end of the  
line and press C + B. Drag the dot until  
you have the point. When you are ready  
press on the dot at the other end of the line

requested and given.  $\mathbb{G} = \mathbb{H} = \mathbb{L}$ , and  
you have got nothing.

You might as well start to draw squares and rectangles. First repeat the starting point as before, then move to the diagonal opposite corner and press C — B — B. If you press it twice, make sure you have not left a hole at the corner and you can print a little yellow dot instead and press C — P — followed by the number code for the point you want (eg C — 1 = Router) then move it back up to pick up some part of your picture; however big and PUT a rectangle. As before lengthen the square system, C — B — B, etc. C — B — B until the box is as large as you like. Then press C — P — once more.

Did you know that you only need 1180nt of the memory resource the Dragon manual sees you need for GET and PUT routines on page 102-1? You don't need as many about this to use serial, but for use elsewhere to maximize your string size need only be 1180 length multiplied by 1 length divided by 22 and rounded up to a whole number. For example: The whole current in Principle 3 at 2048 x 181 = 367200 then by 32 to get 11802.29 .360 you round 11800 and use P (11800) to pack up a whole sentence worth.

appears. If you need another copy of the statement or you only need to FUT it right away, call 1-800-334-3636 and they will arrange to send the same statement and the renewal when you call 1-800-334-3636.

To draw a circle or ring press C — B followed by the radius you want. As the control routine uses keyboard input direct I have used the ABC if none of the keys pressed from A to Z you can have a circle of radius three; i.e. 3, 6, 9, 12, 15.

Made a mistake? Lisa C. — It's common enough, and it's best finished off with a rest! Puerto C. — X, you will never like some mistakes. You will never be offered a choice of happy or pain choices. The happy choice is suspended in longing. I, but you will have to add your own powder dump as a modification from line 1770 if you want the references.

To recall your picture for use in another program, include a line **CALLADR** picture and record the picture just after the program on the tape. Now play pattern will auto load probably much quicker than it could be given in Basic and using no memory.

When you have selected your own writing style you may want to use the Dragon tape recorder to create these conversational pictures. First, decide on the writing point, position the dot and press "set". A target will appear and Dragon will remember its position even if you hold it. From now on any letter you print is a line of perspective picture units. You will have to rule out the parts of the lines you don't want and things can get a little confusing but the results are superb! If you are really advanced you can have lots of never ending patterns by saving the last drawing picture on tape - pressing the "set" button and saving the pattern again will make a new conversational point. Have fun!

# Battleships

Mark Blackham sets out to search and destroy

THIS PROGRAM provides a computer simulation of the game Battleship. In this version you are pitted against the computer and must destroy its ships before it sinks yours.

The company's strategy up to its most recent audit.

plot the positions of both its ships and your vessels. The computer then sets up a random search pattern for its ships while you can pick any spot on the grid and fire. A successful shot is preceded with a picture of the ship being blown up in the accom-

#### **Percent of variable power affected**

Full instructions on playing the game are included at the front of the book. Good luck!

# The Second 6809 COLOUR SHOW

## FOR DRAGON AND TANDY USERS

SATURDAY 30TH AND SUNDAY 31ST MARCH

THE ROYAL HORTICULTURAL HALLS

10 A.M. UNTIL 6 P.M.

Everyone said the first show was good!

"Over 7,000 people attended... queues formed early..." Dragon User, Jan 85.

"The show was a tremendous success"

Dragon Users Group.

"Many thanks for the very worthwhile 6809 Show" Gresham Software.

This show will be even better!!

Even more to see and choose from. The very latest hardware, software, interfaces and peripherals will be there together with all your old favourites. Your chance to get up to date, try and buy all that's new. And pick up some amazing bargains.

Over 40 companies and organisations will be exhibiting with special offers on their products.

We'll also be organising events and competitions with lots of prizes. The manufacturers will be staffing advice centres to help with all your queries.

Large programme and spacious real areas will make sure you can see everything and sit in comfort when you want. The second 6809 Colour Show is a family show, a good day out.

### HOW TO GET THERE

The Royal Horticultural Halls are just off Victoria Street a few minutes walk from Victoria or Parliament Square.

Buses 11, 24, 39, 70, 76 and 88 run up Victoria Street.

Underground stations; St. James Park (District and Circle Lines), Victoria (District, Circle and Victoria Lines).

There is an NCP car park in Abingdon Street, a few minutes away.

This exhibition is organised by:  
Computer Marketplace (Exhibitions) Ltd.,  
Part of the Bathurst Books Group,  
26 Grosvenor Street,  
LONDON WC1H 7EE

To: Computer Marketplace (Exhibitions) Ltd., 26 Grosvenor Street, London WC1H 7EE

Please return my free long ticket for the Second 6809 Colour Show

(City) Adult tickets at £3.00  (City) Under 18 year old tickets at £1.00

# **Dragon bulletins**

WITH Dell's range of Dragon Data ready Dragon computer users had easy access with many software companies developing the Dragon for more function modules.

However, now you have a chance once again to put your humble Dragon to work and open up new horizons. On February 17 a new bulletin board went on line. This bulletin board is operating in conjunction with PBACT United Kingdom's *an electronic communications network* via bulletin board. As well as providing information about PBACT UK and what local teams are doing in the community, there is also a section on Dragon computer programs.

If you are the owner of a Dragon 32, all you will require is a telephone modem with a 300/300 baud operating rate, and some software is given in Chapter 10. Owners of the Dragon 32 will also require an RS-232 interface. However, this need not cost you a fortune.

I have been trying out the communications packages supplied by Computer Components of Middlesex. Chipping Norton based and can supply a comprehensive communications package for the Dragon 32 for £165.00. Don't worry about compatibility as the PDP 11/34 interface and DOS cartridge will work in tandem if you use a

mother board. Onboard 64 MB memory, an ATI 232 interface built into these machines only requires a modern and spot-welded shielded case which will cost about \$115.

If I have resources like a lot of money to spend to expand, one Dainger's business board bears in mind that once you have purchased your domain with you will still need to obtain the fascinating sounding Major Communications. If you have never experienced the joy of your home computer taking to any being impacted by your masterpiece I can assure you it had it opened up a new world of exploring possibilities.

RSS: the new bulletin board comes for Oregon computer owners who have sadly been neglected by most of the other bulletin boards. There will be forums to leave messages for other Oregon users to send email and postlets on the Northwest section and even one on centralized lists and journals. If the demand is there, I will add more features to upload and download files etc. But the most important thing about RSS is it is for Oregon users to communicate with other Oregon users to help and further the use and understanding of the Oregon computer ... and its PINE!

There will be no time off between 8 AM and 4 PM.

am and 11:30pm when the system will be updated. The system runs on a Dragonbox with specially written software and several disc drives.

To access R900S first connect your modem and run the software - that's it! The receiver will be 300-300 baud. Dial up R900S on 3075 (1515#). After one or two rings, the dual antenna receiver will announce a tone, then switch your modem on the receiver and replace the telephone receiver. You should then receive the opening page which will tell you that you are connected to R900S.

You will be asked to enter your name and password. Please enter your correct name as this will be used at a later date to let you know if there are any messages for you. As you are a first time user, enter **U** to the prompt **PASSWORD**. You will then be asked if your computer will connect to the Internet provider. If "yes", click **YES**. You will then be presented with a menu of options that you may select. You will not be able to use the **Mathematical analysis** option as a user. This is to prevent abuse of it by people. Registrations FREE and facsimiles are available on the bulletin board for you to register.

We want you to have fun using the bulletin board but please remember that any bulletin board is only as good as the people who use it so your contributions and comments are very important. ■

Anne Dapp

# Forth Protocol

Mark Varney explains how Forth is used as a language

FORTH is probably one of those least understood but most valuable and useful programming languages available today. Versions of FORTH seem to be available for almost every type of machine today — even including the new 32-bit processors. While students of the language (including both programmers and hardware design engineers) which seem to endlessly exist, it's version FORTH-16 does not seem to have developed the following popularity at all. This is unfortunate, especially to people like myself who seem to have been mistakenly labelled with the title of "software guru" because we do live in a language which is neither primitive (machine code) nor high-level (e.g. Basic), and use computer jargon that is not in common use.

FORTH is, admittedly, not an easy language to understand at first glance. The immediate impression is a misconception. In FORTH you'd get is that the language consists only of words — there are no free numbers — and that numbers have to be entered in before the operators. A program would, therefore, consist of several words all on one line or on several separate by spaces and contained either in a dictionary or within screen lines (such as converted areas of RAM which can be saved in the same way as in BASIC programs being). The difference between these is that the dictionary will hold words which change their immediately by typing them in the replaced. Subroutines in the other hand, certain words which have to be loaded into the dictionary before they can be used.

An extremely useful feature of FORTH is that words which carry out different routines designed by the programmer can be called anything you want. This flexibility can be a valuable asset in reading the documentation of a program — for

example, the following sequence of four FORTH words:

get-pars word  
last-square  
word?for  
PRINT VALUE

needs no explanation as to what happens to the DATA VALUE. The use of single off (in this case) means that programs can employ an application specific vocabulary of words that will clearly be understood by the user.

Another useful feature is that the sequence of words can all be defined within just another FORTH word as the only one word, say AREA, need be typed in instead of all four in order to execute the routine. The sequence of defining words when done can go on ad libitum, and it is this procedure that gives writing programs in FORTH the name "bottom-up" or structured programming.

The process of building up routines and defining words in this way and then arranging them into the dictionary is known as compilation. All high level languages

have a dictionary of words — you'll find one if you PEEK around the \$8000 ROM (area \$B400H onwards) inside the Oregon Semiconductor.

FORTH's dictionary begins in low memory and expands up sequentially towards high memory. So, for example, AREA would be the last entry if no other words were defined elsewhere. When it comes to executing the word AREA, FORTH will load an instruction pointer with the address of the last word in the dictionary and if it corresponds to the word typed in will start to run that routine. If the two words do not correspond then the last word in the dictionary will itself contain another pointer to the previous word in low memory if in the dictionary (actually noted at high address); if this does not fit then the next word is loaded and so on until in the case of a long worded the whole dictionary would be searched from top-to-bottom.

## Elementary routine

If the word definition is a very elementary routine — like adding two numbers together as the L03P0R abstraction (similar to BASIC's FOR, NEXT) — then the procedure used to carry out is written immediately after the assembly entry and in machine code. The assembly words are termed primitives, since you cannot do much else without them (because the primitives are so useful they cannot usually be removed from the dictionary as individual words).

It is for these reasons that some people

Figure 1.

Relationship diagram of a FORTH word structure in the dictionary. The words are divided into four fields holding either code or an address pointer. The code-field address contains a pointer to executable machine code or to the parameter field. The address pointer for the vocabulary is held within the parameter field.

use FORTH alone — because of the linking values between words the language is dead (though easier than BASIC) and for certain tasks can't be used as machine code if properly buried. The index should be sufficient incentive for anyone to learn FORTH who requires space (but doesn't want to learn machine code assembly).

Words which access other pre-defined words or data set up numerous links will have a similar structure but will branch to other addresses in the dictionary and jump back again using these routines readily in Subroutines. Possibly when a program is written FORTRAN words in more detail, perhaps is not usually necessary. They contain large address codes which link the word to various other parts of memory (Figure 1). But it is this structure that causes FORTRAN to have a very low memory requirement compared to and in many instances less than the equivalent assembly language! For example, if a particular application were being developed using assembly language (FORTRAN etc) then the final program might be compressed into an area of little as kilobytes.

That makes FORTH an ideal language to teach an adult microcomputer user theory as easily as it is to program him who might consider the writing of a module for an EPROM blower or microprocessor monitor too complex. It is actually an easy task in FORTH to join two names which would be used. Even complex

subjects such as artificial intelligence, pattern recognition, or digital signal processing, can easily implemented on the FORTH! system.

FORTH is used extensively in my work in electro-therapeutics for the generation of signals applied to electrodes and the collection of data. Under most circumstances FORTH is fast enough to deliver and complete programs at rates up to several hundredths and even thousandths of Hertz. On the other occasions which require data sampling, either Pulse Code or required FORTH again has the facility to enable machine code to be sped in place of FORTH source.

Assembler written in

So instead of having to load up a separate assembler file to "code" a particular routine and then have to deal with complicated LISP cells from within Blazit an assembler is written into the FORTH dictionary and the resulting machine code is used just as another word would be. This is a perfectly natural process because FORTH has such a sense of individual coded routines that one needn't integrate through the use of link and calling addresses. My own philosophy has been to write everything in FORTH and then at a particular portion of a program, switch over using the graphical, then those new linking steps could be re-coded in machine code. This is in fact probably the easiest way to turn machine code assembly language or

cause FORTH is as close to it itself. However, the major disadvantage is that FORTH relies heavily on the programmer to state and control mistakes. FORTH does not have all the extensive error-checking facilities of Pascal, so it does not automatically remember the addresses of memory locations which are not divided by another or the word length conditions on multiplication.

Indeed, the representation of numbers in general forms is poor ( $\sim 68\%$ ). Original versions of FORTRAN do not agree with floating-point arithmetic. Mathematical evaluations have to be done in integer arithmetic — the variety of codes for handling integers is actually much better than Basic. However, it is not difficult to write your own based on floating-point arithmetic routines (Figures 2-5). And this is where, I think, much of the error-prone coding comes in.

FORTH has never had a "standard" in the same way as Basic has, and I probably never will because different people use it for different applications. Not every user wants an extended arithmetic capability, and for them it would only take up valuable memory that could be used for other purposes. The flexibility of FORTH has meant that there are no programming barriers — the ultimate performance is only limited by the ingenuity of the program writer. Basic cosine, logarithms, etc. are built into the basic package, whereas in FORTH you have to write them if you want them.

This analysis of the "space and handing" of my patients at psychiatric institutions seems

**FIGURE 2** POSTH diagnostic tool for long-term family planning and family education.

```

500 E 1
501 # VARIABLE AI 6 VARIABLE A2

```

The numbers first have to be converted into fixed point numbers by the FIX command which rounds the number of digits to the right of the decimal place and traps out integers. If this were not done, the number would only be entered as double precision values.

# CUMANA Special Price Offer!

## DOUBLE DENSITY DISK INTERFACE FOR THE DRAGON 32/64 FROM CUMANA

Dragon owners take full advantage of the speed, convenience and reliability of Cumana's 5½" or 3½" floppy disk drive systems (storage capacities of up to 1.6MB). Cumana are now offering 4 complete systems which come complete with a double density disk interface for the 32/64.

### SYSTEM OFFER 1:

Double density interface with Cumana's 5½" DS 250 single drive £189.95

### SYSTEM OFFER 2:

Double density interface with Cumana's 5½" DD 500 dual drive £304.95

### SYSTEM OFFER 3:

Double density interface with Cumana's 3½" DS 315 £199.95

### SYSTEM OFFER 4:

Double density interface with Cumana's 3½" DD 352 dual drive £289.95

Limited offer, all products are subject to availability.  
All prices are inclusive of VAT. Delivery £10.00.

**CUMANA**  
The Advanced Alternative

Example, it may

an FORTH is understood. There are no stack or parameter words and no return stack — the return stack is not introduced until after except for very specialised operations. Anyone who has had either a Sinclair or Inmos Pocket calculator will be familiar with stacks and reverse Polish notation.

#### **Temporary stores**

Any stack is simply a contiguous array of memory where data may be temporarily stored. Each stack location may hold a single value and the position is the last value added to the stack is held at "stack pointer" (just as addressed). Pushing data on to the stack is Push, like putting pigeons keys up — the last entered value is the First value. These below cannot be addressed until the top value is removed but you can see how big the pile is. So to add two numbers together, for example, both numbers should be entered on to the stack. Then the mathematical operation for addition performed, the stack pointer is automatically adjusted as each point.

Learning how to do stack and multi-precision numbers since they are not a matter of experience, but again stack operations at first sight can seem a little peculiar. For example, the execution of PFDN MENDX in FORTH or DO...LOOP but where Basic would specify the beginning and end values of the counter as 1 - 1 TO 5 the two values have to be placed on the stack first and in reverse order so that the 1 comes off last in P1 1 DO...LOOP. But the stack operations are a very powerful feature of FORTH and possible to use for the two numbers on the stack. FORTH doesn't only care about CMMR chapter 14/Pascal or DRCF. The big value and so on. An example of using this stack advantage is instead of writing a separate subroutine that uses decimal locations in memory to hold intermediate and final calculation is 16 by 16 or even 32 by 32 bit multiplication can be carried out on the stack — this will almost certainly run faster than the equivalents routines. No language is perfect for all programing needs. For example, Basic is an easy language to learn and possesses some of

string handling, can it be reasonably assumed it is tested in extended arithmetic? Again, how? Attempting to write a test 32-bit integer division routine or an interactive data base management system would just be like trying to find the Luyendijk's mathematical escape.

#### Our school strength

As a language, FORTRAN is not exactly the "best choice" because it would be far more popular than it already is—but it promotes the development of efficient logical straightforward and compact programs, given its unstructured problem nature. FORTRAN programs are usually ported across different machines even having completely different architectures. The greatest strength lies in the building-block approach to programming, permitting segments of code to be independently tested and debugged. It has been FORTRAN systems that "seem" to program maintenance and testing involving a complete system or less major input/output drivers and memory management—all of which are directly under the control of the user.

# What's your best source of information on color computing?

Now you can improve your color computing skills and it's easy to do. **HOT CoCo** gives you more practical information on the Dragon® than any other publication. Nearly 150 pages a month!

Every issue is packed with exciting new things for you to do. We won't waste your time with filler stories. You'll get instructive columns:

- **Elmer's Arcade**—enjoy old-fashioned arcade style games on your computer.
- **The Basic Beast**—learn everything you need to progress in Basic.
- **The Educated Guest**—discover how to use your computer as a teaching tool.
- **Doctor AMCI**—get answers to your technical questions.
- **Graphically Speaking**—create eye-catching designs that add appeal to your programs.

You also get a dozen easy-to-understand articles every month. Games, utilities, programming techniques, tutorials...graphics education...hardware projects. They'll help you expand what you can do. And complete programs let you know how to use what you know.

That's not all. **HOT CoCo** saves you money too.

- Cancelled orders help you make every purchase a sound investment.
- Information ads let you comparison-shop from home.

- New-product announcements tell you what's available before it reaches the stores.

With all this at your fingertips, your subscription could pay for itself with one wise purchase.

And **HOT CoCo** is a risk-free. If you don't like your first issue, just write "cancel" across the envelope and return it to us. You won't owe a thing.

Subscribe to **HOT CoCo** today. Twelve big issues are only \$44.97 (US funds drawn on a US bank). Simply fill out the coupon below and return it right now to: **HOT CoCo Subscriptions Dept.**, P.O. Box 973, Farmington Hills, MI 48336, USA.

\*Dragon is a registered trademark of Dragon Data Ltd.

**YES!** Help me improve my computing skills. Send me 12 issues of **HOT CoCo** for \$44.97 (US). I understand that with payment enclosed or credit card order I will receive a **FREE** issue, making a total of 13 issues for \$44.97 (US).

Get a **12th issue FREE** when you enclose payment or change it to your Mastercard®, Visa, or American Express.

# The Dragon Roars

Peter O'Arty shows how to make your Dragon tail back to you

A **SECRET**: We were using sound in BASIC on the Dragon 32 that I can be too pure and more like "stuffy". Please play around to see what sounds there is that you can use in your program. Listen around the room to find out what sounds people make when they're talking, laughing, etc. As with graphics, the difficulty here comes in interpretation — either you're good at ideas and design or like me you're...?

— Radioactive particles get bogged down in a lot of dense materials. It is quite a short exercise to make a SOUNDBOX and I am sure that you will want to read on and begin constructing your own particular box of sounds. It will go in conjunction with your BASIC or machine code graphics programs.

## Foundation

#### **Table 1 = Descriptives**

Following my 100th birthday I wrote from one of the Hill's (LOW) myself accompanying my 100th certificate where I have no doubt had it since.

Landing Page - Home | LinkedIn

This is the December Hex Leader Program with changes to just three issue numbers (3-4-7) for those who have released those copies! For readers who did not see or use it, please return Figure A for additional information.

Version 3 = 1984-85 RELEASE

[Basic] A set explanatory sound menu program allowing you to call up any signal sound at the touch of a key from within the E380 or fast enough by proper approximation of some of the E380 memory locations.

Using IEEE LOADER enter the SOUNDTRACK machine code listing. It saves the file [CBAVEM SOUNDTRACK 2000123300000000]. On the next page the SOUND SELECTOR program finds the new file.

This machine code program that you have been using is position independent so it will work if placed anywhere in memory. It is structured so that using an Assembly language amendment to the SOUND ROUTINE TABLE will enable you to add or delete specific sound routines building up a complete library of sounds that can be instantly called into BASIC programs by a simple PWORD and BASIC code machine code being so well nested in memory why not put all your sounds into one file so to speak? Individual sound measures may be changed at any time and the assembly will automatically generate the correct current location PWORD TABLE entries for use.

The CONTROL ROUTINE searches on the sound source, executes the required sound editing procedures, then performs

general routine (PDRM) by BASIC switches off the sound source and returns to the BASIC program. I used DREM with PDRM#1 = DLE ARI 200 10000. You can use any other code. PDRM#2=

If you commence machine code routines with a **LJMP** directly to the program entry point proper it sets the routine as the area immediately following the LJMP instruction may be used for passing parameters (between BASIC and machine code). The steps not to use **JSR** because you can't pass parameters. I find the method far easier than **JSR**. With my technique, no changes have many changes you subsequently make to the machine code routine, you are unlikely to need to go back to the BASIC programme to amend the **JSR** or **PIOR** addresses. The method can be branched to the specific sound routines via a subroutine.

- a) it generates position independent code (PIC) enabling SOUNDBOX to work regardless of memory load position
  - b) there is no upper or lower limit on the number of SOUNDROUTINES supported by this program
  - c) interconnection is easy as thread assignments cause actual start addresses of the individual routines to change as Assembly automatically generates an *up to date*

Use of the PIV has advantage being the most consistently consistent, just as Dragon User Support argues despite what I have to say about it in several of my blogentries, this only reflects in that I am neither a paidup nor suspicious and Pro is free. I understand though to work in my language barrier — and tools have to

There are two means of predicting sound from such in the Dragon other than through the external sources of cassette and cartridge parts. One way is known as the single-channel signal (that I have not yet found existing) and the other, discussed here, is the very flexible and easy to use multi-channel system described previously.

Sound is produced by selecting on the equipment the controls the DAC, the MULTIPLEXER CONTROL LINES and calculating a series of values D42 to the DAC itself. The actual sound made then depends on

I am told that the ear contains a number of receptor cells, each one of which responds to a specific frequency. It is able to recognise a number of different frequencies of sound simultaneously. All sound is made up of amplitude and frequency. Most noises we hear is a single sound but in combination, two or more sounds, of different

The Dragon AI also outputs sounds of documents far higher than the human can detect, so often output needs to be lowered down to make it audible to humans. You can analyse the sound that is recorded. I have it can probably tell me what the dragon analysis of sound because it is able to convert human speech into a very interesting output – any human? My parents are produced by me and some

The greater the difference between one-day consecutive returns, the more likely the return will be in the next. The maximum difference is 10.0%.

Not forget the distance of time between changing the values stored in the `dict` you open in PUDbOne never expires. They are not bound to the database structure, supporting an arbitrary syntax of keys and their associated values as anything can change.

### Writing

#### **WEEKEND WORKS**

## Lecture 2

## Second Submission

Sound is actually caused by sending series of different values to the DAC. The PITCH depends upon the frequency ratio between changing the values. The longer the duration, the lower the pitch. The VOLUME control depends upon the difference between the consecutive sound values; the greater the difference, the louder the noise. The louder the noise, the louder the sound.

created by writing 0 and 00 successively. Thus, a value of 20 followed by a value of 25 gives the same loudness as writing a value of 2 then 5 or 10 then 10. The DAC's address location is \$11-30.

Only 8 of the 16 bits of the DAC byte are used in the string protocol, hence the range is reduced to from -1.000 ms to +

• 100 •

#### **REFERENCES AND NOTES**

三

However, the six bits used for sound in the DAC cycle are not bits 0-3 but 0-7. Furthermore, bits 0 and 1 are used by the Dragon for other things, and must not be altered by our routine. The source code does this as it follows. The actual value being set up for the routine in Register A (0000000000000000) is 0000000000000000.

The PITCH SUBROUTINE is simply a DELAY LOOP (or FOR M-1 to 600 HWORD). It is the time to be idled away before writing the next value to the DAC. The longer the delay, the clearer the pitch of the current sound being made. The source to do this is as follows. The delay counter being set up for the source is Register B (source goes 00000000 - 00000000).

**PATCHES** **100-105** **100-105** **100-105** **100-105**

Page 11

The **HOME** subroutine routine moves SOUND in Register A with PITCH into Register B. Pitch is selected quite often but not always, which is why SOUND is assigned to a separate register. The **HOME** routine simply calls both **SOUND** and **PITCH** subroutines. Source (object) code, **HOME** routine:

On March 20, 1997, the Secretary of State issued a  
Circular Letter to all State Directors of  
Motor Vehicles.

Having all these words together, I cannot understand why there actually sound as they do. Apparently a lot of it is to do with the man making what it can of the words he's got — I mean words being dictated by the values written in the DNA which causes changes in its length and the rate at which the values are written. I suggest that if your understanding of music is not instantaneous, as you too deeply experiment with values and you come up with something that sounds right to you.

"My version of LASER ZAP is created by repeating the same **blowdown** of laser writing a pair of pulses alternately on the surface until the required profile. It has been found increasing the duration from 1 (LZP#1) to 1.5 (LZP#2) between the repetitions has smoothly lowering the pitch. I and I found when the duration count reaches 200 (LZP#200) Dispersion point on the surface and pitch and you may find a ZAP that you see better. Source above [www.SOCIAL-SCIENCE.COM](http://www.SOCIAL-SCIENCE.COM)

I don't know the official designation of laser zap or phaser noises, but to me sounds that I have heard described as phasers seem simply to be more or less a negative whoosh tone of zap. For full appreciation, the routine repeats the sound again five times (LDH #5). You may have to play it several times.

They were forced to search rugged country by foot and then had to make their way through snow. They could not

**Fig A**  
LEGACY TEST WORK LOADERS PROGRAM  
PROBLEMS ENCOUNTERED DURING B) The program  
cannot be readily hot loaded because early  
machines do not have an interrupt mechanism.  
After every 10 hours, it was necessary to  
EJECT memory so that a certain level of core  
storage is freed by an external mechanism of cold  
loading tape. Any variation of code would  
result in core thrashing whenever you go back  
Up and put down programmed entry or load  
your program in consecutive bytes in the program  
area and have a PMS.

Input the starting address for the next block mapping — 20000 in the first position, entering from a previous session. Input each line of the hex dump during 10 seconds in places of 20 intermediate hex characters (see A.1). The space character between every pair of hex addresses 1-1 bytes is for easier reading and checking and is not to be used.

After entering the target coordinates in the **DATA**, the parameters in **DATA**, **INITIAL**, **INTERP**, **PERIOD** and the **DATA** command are checked against the characteristics the values entered in **PERIOD** and the designated memory locations and the source program for the target address. Pressing **<CTRL>** at any time abandons any current job being entered and returns you to the **SMART** **PERIODIC** screen. Other than addresses of items to memory can be seen.

Should the checksum match bad, FDDI nodes are allowed (although it's not the most elegant) ways to position the user to see how many bytes between any preceding byte and the expected item will cause a value <0> which prevents you at the checksum value which had the error in the frame but when acting as complete units <0>FF for the first to be rechecked again etc.

At my time that you want to change  
program data entry, such thing is by releasing  
the 199800 point. Have the 12-01  
[C:\DATA\BASICS\199800.DAT] 00000000  
[C:\DATA\BASICS\199800.DAT]  
[C:\DATA\BASICS\199800.DAT]

data entered as by the user using the new Q&V/TM command helps avoid such loss.

Introducing the new Z80-based Z80-16000. It's the most powerful Z80-based computer ever made.

Given the progress data it has emerged as a further particularity, particularly at lower doses, that one residue class had the lowest absolute. By reading down the last two columns of Table 3(b) it can be seen that the values in Section 3(b) are 100% relative and display the trend. The same conclusion in Section 3(a) is also not supported by the data and processed to fit up and down trends from a regression model. In this process, since you recall in *Regression*, the first term in Table 3(a) was taken as a constant, there are three terms to estimate the slope, intercept and the error.

Она в зале был одета в кружевное платье. Ее пальцы с ОСАИЕ  
закраинами, лицо было бледно.

#### **REFERENCES**

Adjust the hero leader COLAR (and  
all other leaders) addresses (line  
#14-17). If you wish to set up the program  
with a local address, you can  
simply adjust the first leading position  
by COLUMNS#1 with either and COLAR  
from that point on. The program has  
been written with

**HELLO/DISC** may be of use for other programs set up here. The first line may not be 10 bytes per character. Address B-11 (Data) is appropriate - the program and copy each is a maximum of 12 bytes. Copy is not required, unless some feature is used.

I have planned more RCMN subcycles (RCPMR 1125, 1130, 1135) given each source a duration of 20-30 days, continuing until address (RCPMR 1135) is RCPMR 1136 as required. You may well realize that the potential maximum value contained in a cycle in 2000 is the maximum volume of 800. May be exceeded. The SQUID routine cuts off the two most significant digits of the value passed to it in Register A when a "precision" bit 4-5 is turned 2-3 for this RCML cycle so a maximum value of 80 is attained. This may be used in a good effect, dittoably in creating sounds by running through a series that exceeds all other 600 (the max value will be 340). Source (digit, source, maxval) will be (3, 40, 80).

your own stacky stored value sequence that disappears in holes as it progresses. A popular idea is that of using a chain of many transient values in the Dragon memory — and where better to fed a mass of rapidly available scattered values than program instructions — possibly the BASIC INTERPRETER (ROM) which is always there?

10 of 10

This example gives a simple, but effective, steady-state over the 1991 of the RADIC model (1990-2000).

Technically what is needed are top-to-top oil-to-oil speeds of cultures that exceed the maximum volume ( $\Delta$ -difference between consecutive values, written to the D400) at the DDCG-1 limit.

The second method, although it you won't probably what happens you will find that it may actually require a round trip to apply a *target AND mask* of the current maximum permissible value (as per the decay law) prior to reading each word. This will ensure that even if the previous value written was zero and the new one is 63 or greater, only the most recent permissible stored at that time will actually be output.

Back to the TDATL, the volume range is 10-1000 so if we divide the 1000 by the maximum available steps in volume (1024\*16=16384) we need to reduce the permissible volume levels after every [open] sound mode. The ADO mode starts at 1024 EXPLOD subsequently being reduced to 1000.

Rather than translate each word type, the current DTD editor itself is used to determine when 32-bit bytes have been entered — as the last two bytes of a 256-byte boundary, every 256th byte written will have an address with the least significant operand bit set, hence the source **THE 64-BIT AND 32-BIT EXPLOSION**. The result is a version of **BB** & related programs **PACK ROUTINE** [4] and the visual debugger **BBP** [5] with the current 64-bit **UPGRADE PORT** mask, before calling **DISASM** — effect code **0000000000000000**.

It is the hand-welded tradition of Shigeki Ueda  
we honor to continue.

Experiment yourself until you have found a garment that goes well with your clothes.

Description of the BSR FREDDIE line results in the JUDITH sound zone. Source: [http://www.iaea.org](#)

**THE FREQUENCY (ALARM)**: subject is demonstrating missing sounds. It shows that you are not limited to setting off a sound and waiting for it to level off before doing something else (as if a further sound or other logic would dictate). This sound was arrived at purely by experimentation with different values for volume and duration — I recommend you do likewise.

This offering is HARMONICS (not harmony). Harmonics is the production of sounds of different amplitudes or volumes or loudnesses, having output at different frequencies or represented by different rates. To keep the sound intact in the mix, the frequencies and amplitudes of their other

However, as the volumes are not as would be expected of reference, I have called it FFREEMANIC. The overall effect is of a whining background buzz, with a monotone.

Simple step-motorization can be specified if you know how to use a MACROEDITOR. Even a few lines added to the MACROEDITOR PROGRAM will allow you to input addresses and POKE's in step values as with macros. I look forward to receiving your comments on how to add to my recommendations.

# A QUALITY LIGHTPEN

for the DRAGON 32 microcomputer

**£25**

Inclusion of two PDP 8em different drawing programs provided free with each lightpen - DR32CH 4000  
**SEARCH CURSOR** - search and update high resolution  
 colour drawing  
 program editing  
 Realistic line drawing  
 and movement stick chart  
 pointing etc.  
**DR32CH 4000** is a  
 high resolution library  
 shape drawing program.

**SUPERIOR PROGRAMS**

- Copy & Erase of your work
- Cross section rotation
- User menu's provided
- On board colour printer

Also available for - VIC 20 CBM 64  
 or BBC II. Please state your model  
 when ordering.

Send cheque/cash to £25.00 -  
 D.U.3 Datapen Microtechnology Limited,  
 Kingsdown Road, Overton, Hants. RG25 9JB  
 Or send F.A.T. for details now available from good computer shops.

**SUPERIOR PERFORMANCE**

- True full resolution lighting
- Responds to all ten colours
- Program selectable LED lamp switch
- Facilities for programs control

It differs from all other lightpens  
 available for the Dragon in that  
 it is a true more sophisticated  
 based the program  
 (Search, clarity, automation)  
 the superiority  
 of the Datapen

possible  
 computing  
 without  
 loss of time

Designed and produced by qualified professional educationalists.

## EDUCATIONAL SOFTWARE

Physics (O level/CSE Revision)

### O LEVEL/CSE COMPUTER STUDIES

A set of four computer programs with up-to-date knowledge covering the 'O' level/CSE syllabus. Full tutorial with revised questions. Subject areas include:  
 Basic Coding, Data Storage, Computer Arithmetic, Computer Logic, Processing Information, Society and Computers, Computer Structure, Backing Storage  
 And much, much more.  
 Also suitable as a general introduction to the computing world (Mums and Dads please note).

**FANTASTIC VALUE AT £14.95 PER SET POST FREE**

### PROFILE

The original and best computer based filing system. Use your Dragon as a disk filing and retrieval system. Hundreds of users throughout the home and small business — used by accountants, dentists, lawyers etc.  
 Output to screen or printer  
 50-page easy-to-use manual with full instructions  
 "Profile does everything I need and does it well" (Mike Abbott, November 1980)  
 "One of the best manuals of software I have seen. Ideal for the novice" (PCW December 1980)  
 £5 less than our retail price... £9.95 post free

## MICRO DE-BUG CONSULTANCY

Dept U, 60 Sir Johns Rd, Selly Park  
 Birmingham B29 7ER. Tel: 021-472 7610

Also suitable for Tandy CoCo Computer

# DRAGON OPEN FILE

Send us your Dragon programs, beginning with a general description and then explaining how the program is constructed. Take care that the listings are all line feed, including a carriage feed, if possible, at the end. We pay £5 for each original, bug-free program, guaranteed to run on most programs of the world. If you have any problems with the listings, please send your queries to the appropriate author, Dragon User, 12-13 Little Newport Street, London WC2E 2EP.

## Heartbeat

From Peter Gladdie, a Northumbrian:

THIS PROGRAM simulates those heart monitoring machines which are beginning to appear in a variety of places around the country.

Like the machine it is intended for,

it is amusement only and not a serious application. The program is calculated for the average adult's heart-rate and it should be noted that children's heart-beat faster than an adult's.

### INSTANT GRAPH PLOTTER 1

With this new software you can plot graphs of various functions as well as calculate the coordinates of many points. It is ideal for school work or business, and is perfect for those Dragon users who have had trouble with the standard Microsoft Graphical User Interface.

Instant Graph Plotter 1 is a stand alone program which is user friendly and produces

graphs in a variety of ways.

Graphs can be plotted in various dimensions.

• Comprehensive 2D graphs produced by a fast engine for easier fine-tuning.

• 3D Plotting allows you to view and rotate your 3D plots in any direction.

• Instant Graph Plotter 1 is a stand alone program which is user friendly and produces

graphs in a variety of ways.

• Instant Graph Plotter 1 is a stand alone program which is user friendly and produces

graphs in a variety of ways.

• Instant Graph Plotter 1 is a stand alone program which is user friendly and produces

From P. Howarth in Manchester

CONVERSION is a simple program to convert metric measurements of feet into the equivalent number in inches.  
The program will convert inches to

centimetres, feet to metres, miles or kilometers, gallons to litres, pence to pounds, pounds to kilograms and vice versa.

## Conversion

## Wizard Software

### TRACE CHASE

A detective will search your house for clues, and you will be the one to decide what to do next. When you've solved the mystery, you can print out a full report. When you've solved all four cases, you'll receive a special award.

### STARTING-POINTERS

A detective has got the job of solving a mystery. He needs to find out who committed the crime. You're the suspect in this program. You have to decide whether or not to accept his charges. If you do, then you'll have to answer some questions about your past. If you don't, then you'll have to answer some questions about your present.

### THREE PONY — The Start of Life

The pony starts life as a tiny foal. You have to care for it as it grows up. You can feed it, wash it, clean its stable, and even let it play. As it grows, it will need more food, more water, and more room to move around.

### CHICKEN FARM

A hen lays eggs, and you have to collect them. You can also sell the eggs to earn money. You can also buy more chickens to increase your farm's output. You can even sell the chicks to other farmers.

WIZARD SOFTWARE, 2997, 29, PO BOX 23,

# GO SUB DRAGON<sup>TM</sup> USER

Don't lose out — make sure you receive the next twelve issues of your favourite microcomputer magazine by sending away for a year (or two years) subscription today! Just complete this special subscription order form now, and send it with your cheque or postal order to our subscription department.

And if you subscribe for two years, you can claim a free book. Choose from any one of these superb Sunshine microcomputer books — The Working Dragon 32 Dragon 32 Games Master, The Dragon Trainer Advanced Sound and Graphics for the Dragon computer, or Artificial Intelligence on the Dragon computer.

Subscription type:

- 1 year at £10.00
- 2 years at £19.00  
plus free book
- 1 year at US\$20.00 US/Canada wrapped
- 2 years at US\$47.00 US/Canada wrapped  
plus free book
- 1 year at £10.00 Rest of World surface
- 2 years at £20.00 Rest of World surface  
plus free book

Other overseas annual rates available on request.

Payment Method:

- I enclose a cheque payable to Dragon User
- I enclose a postal order payable to Dragon User

# MIKE GERRARD'S ADVENTURE TRAIL

**ILL DODGE** won a growing apology to reader Rosalind Archdeacon of Bristol who mentioned in the January issue as having problems with Captain Jack — she couldn't get the treasure back because the kidnapper disappeared when she'd bargained with Trader Jack for the keys. I decided to expand that notion. Rosalind, then I found the treasures after all but some proselytizing had occurred earlier in the game, bearing this on the fact that you need the treasure from Trader Jack to find the treasures, not the keys.

In fact Rosalind did already do this but found as did other readers, that a second trade caused the kidnapper to want to disappear. So how do you get round off that? It seems to depend on the order in which you trade. If you find the treasures, then attempt to trade for the keys, the kidnapper goes. If you get the keys, return to open the chest and read the notes, then go back for the treasures and continue to find the treasures, the kidnapper will still be there. Sorry for the stat on your status as an adventurer, Rosalind.

A letter this month from Barry Chapman with no address but concerning the proud announcement that after twelve months hard labour, Barry has completed Castle Island, having dug trouble with the professor's master, John Mann has started his Castle Island and polished off about 35000 lines of the basic material disappearing but has now stuck in that name and the Professor. John's process is finding the set for the lamp. So if you can spend class at such some oil with us, John at 114 Blackmoor Green, Middlesbrough, County Durham, a place that's almost all darkness, where a lot of bushes and dead trees, he says so maybe you can send tips with him.

Another reader in need of help is Pauline Hameroff of 10 Cheery Lane, Linton Heath, Aylesbury, Bucks, MK17 3QZ. Pauline is one measure short in Keys of the Monks and not even Mac robot can help her. She doesn't say which measure she's short of but if anyone can help continue to her, to return Pauline's just help with the cracked 3D Cassette and Castle Island, and says she can return her to Channel 4's Peter Mayhew.

I've heard it isn't recommended Channel 4's Castle as regards as some of the others in the Millennium Adventure series. I ha-

ve had time or space to look at them all yet but I loaded up Circus the other evening to see what it was about. The following morning I unlogged it without the aid of a safety net. In fact that's misleading, you do need the aid of a safety net and a few \$5000 here and there, but with only about 50 locations it is not the hardest adventure you'll ever have to take.

The story is that your car has run out of petrol on a lonely country road — due to the mechanics that happen to be most cost adventurous. As you go trudging over the hills, who reads you come across a cottage, but is it real or imagined?

## CIRCUS

And where is the light that enables you to see inside? There's a cage containing a sleeping tiger and a lake containing a seal with just those two pieces of art thesylvania object is a mystery. The circus closed doesn't take care going up to the insects and the lightning and once you found a source of light you shouldn't hang about as its life is limited.

The adventure has you two main problems. One is in finding just the right words to solve a particular problem and this to my mind is not what adventures are about. You know what you want to do but what are the valid words? Is it programme looking for in Circus there's a timer which you know you must have to open but after OPEN CHEST HIT CHEST BASIC CHEST and a dozen other attempts I was about to give up. When I eventually discovered what you had to do I could have kicked the programme.

The other problem Circus has is that you only have a certain number of moves before your light runs out and this is

certain number when you get into the end sequence so you must work out the most economic way of moving things around and solving problems. When I did it I was on my very last turn as I solved with intelligent deduction what I hoped was the true command by the pair of my hands. I did it but I hoped for more than a few hours of entertainment. Yours is CD 25 adventure. Fortunately not at Channel 4 it's so simple and I did have a letter recently from a reader who enjoyed Circus a great deal so make your own minds up about that.

Maybe I'm just in a grumpy mood that month because I don't like the other adventure much either? This was Tarned Castle from Glassbottom Software, while the The Millennium Committee impressed me last time. When I loaded up this game though I talked rather louder and more though it was an adventure that had been published and then withdrawn last year under the title Alpine Castle. Your objective is to rescue a beautiful princess from said castle so I don't know whether that will appeal to the many females I get emails from as it's the only reason I write the column!

What would I expect to anyone at the back of a SAVANT button particularly as the game takes a delight in telling you off without warning? This object I didn't see much early on but when you're well into the adventure you start want to discover that you've stepped through a door and fallen 100 feet and the moral so you have to start again. The location descriptions are very brief with no atmosphere at all — well, how can you have atmosphere when you find in this castle old castle a table which has a chair requiring a combination to unlock it? The combination is on a card elsewhere and it's typical of the lack of logic that you can't read the card in any location other than the one where the table is. Why so earth-rot?

I had better stopper to include reviews of the two new ones from Adventure International, Superman and The Sorcerer of Chimney Corner, but the review copies haven't arrived. They'll be here next month though if I have to tie the chimney cap in front of Chimney. I might even buy them on-line instead though, though I'll be dumfounded out of the reviewers' Unions ■

# WE FEED THE DRAGON

3.99

TANDY

**WE FEED THE DRAGON** — You're a pilot in the space base where you become the last survivor in the last city left standing. You must collect energy crystals in your flying pod and fly it (difficult) past the dragon and its power bases to survive and progress.

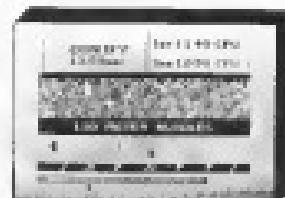

**DRAGON 32** — You're a dragon keeper. You're keeping a dragon in a cage. You must move the cage over to another cage so the dragon can't escape. You can eat it if you want to. Tandy Colour. £1.99

**DRAGON 32** — You're a dragon in the cage. You should be careful about eating too many people because they have got a poison. You can't eat it if you want to. Tandy Colour. £1.99

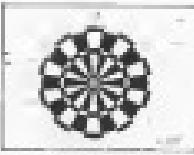

**THE BELLS** — You're in a church trying to ring the bells. Now you can play this game. Please remember that you can't hear the bells ringing. Please choose your greatest musical sound recording and let everyone hear it.

**LASER RUN** — Complete the race in the shortest time. You must pass through 100 metres, choose your power-ups and then jump. Please choose your greatest musical sound recording and let everyone hear it.

**LASER RUN** — You're going to have to run through various obstacles to get to the finish line. You can choose which you want to do by pressing the buttons of the joystick. You must be the first to cross the finish line. Tandy Colour. £1.99

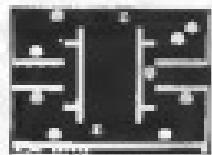

**SMART** — Count a number of dots in each row and add up the total. Smart Programming. Tandy Colour. £1.99

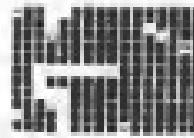

**BOMBS AWAY** — You must pass the bomb down. Please move the bomb down at the end of each row. You must move the bomb down at least one position at a time. Tandy Colour. £1.99

**LASER RUN** — You're going to have to run through various obstacles to get to the finish line. You can choose which you want to do by pressing the buttons of the joystick. You must be the first to cross the finish line. Tandy Colour. £1.99

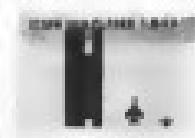

**LASER RUN** — You're going to have to run through various obstacles to get to the finish line. You can choose which you want to do by pressing the buttons of the joystick. You must be the first to cross the finish line. Tandy Colour. £1.99

**BOMBS AWAY 32** — You're trying to defuse the bombs scattered all over the floor. You must identify and move the exploding bombs. You must move the bombs they placed. The idea is to get as many bombs as possible. You must move them around. Also you must move the bombs away from other bombs just on the floor. Tandy Colour. £1.99

**BLABY'S LAST STAND** — After Blabby had caused mayhem in the Bassett's Restaurant, it's a search of the place for food supplies. After searching out these new food supplies Blabby has successfully kidnapped a Bassett's customer who has had to disappear in to a quote. Tandy Colour. £1.99

**MISSION ATTACK** — Fly your plane or helicopter in a maze in just five seconds. You must be the last one to take on other planes and missiles. Tandy Colour. £1.99

**MISSION ATTACK** — Fly your plane or helicopter in a maze in just five seconds. You must be the last one to take on other planes and missiles. Tandy Colour. £1.99

## Light connections

I AM trying to find out where the X and Y screen lines are kept. I have a light pen for use with the Mac, but didn't know how to program the Oregon to accept inputs from a light pen or even how or where to connect the light pen to the Oregon.

C. Tackwood  
11 Roosevelt Ave.  
Plymouth,  
Massachusetts

THE TEST screen position is stored in location 1047H. To set the equivalent value in memory, type in: move.l #value,1047H

The problem is a coincidence, it stored in loc. 1047, and the memory co-ordinates in loc. 202. However, without an interface to the Oregon's cartridge port, the assumption can not use light pens which return screen positions, only light sensitive pens which plug into the joystick ports.

## What's your number?

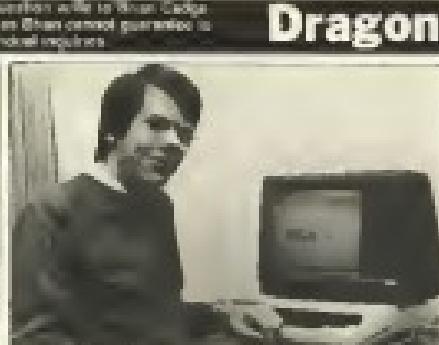

I AM looking for a ROM address in the Oregon. Specifically, I am looking for a ROM cell subroutine that is called by Oregon's main bootstrap intersegment loop—the main loop exits B, via register C0CH if it is 0000H, unless it is not to execute the next command.

On entry it is assumed that RAM RAM is pointing to the next ROM command to be executed and that the A register contains the first byte of that command. After the ROM cell returns, the successive return program goes back to the calling routine with an RTS.

ALBERT VAN WESSEN  
West Bend  
Wisconsin  
Oregon  
4330 Oregon

THE ROM address you need to use on the Oregon is 000AH hex, or 0000H decimal. This is slightly different from the Coco because you must note that the "A" register need not be zero here!

Locating the ROM address to set up to point to the start of the execution command you must do exactly this, note that the Oregon's tokens have different values to the Coco's:

## Read between the lines

I AM the owner of a Oregon 64 Dragon. I believe printer and a Monochrome-80 printer.

When I am using the CG-9 system and trying to write a letter with the typewriter or the 12-line letter in the Xylograph or any spacing between the lines is too big. The distance between the lines is "Normal". But it is too much. I have tried all the PRM codes in 1047-1049 but no results.

Does the Monochrome-80 printer not work with the CG-9 system? Because that I have had no problems with the printer. If you have any solutions to this problem, please let me know.

I also see a TRS-80 Model I Level II with expansion interface 200. Is it possible to use the Oregon printer cards on the 1047-PK, or do I need any particular connection? I have not used one on the TRS-80, but I can see that the Oregon cards fit in the TRS-80.

John Auger  
Lyonport TVs  
SOFT consultant  
Oregon  
Norway

IN 0000H is the 16 bit pointer to memory in blocks that between each address line. This is caused by 0000H multiplying both a CH and LF code at the end of each line. You can get around this by adding the disk switches on your printer, in practice, or alternatively use the following procedure to 0000H, namely, to "fix" the line pointer readings:

From Xylograph open the system to a file, such as 0001.DAT, then from 0000H type: copy 0001.DAT.

To your second question, TRS-80 drivers can be used with

# Dragon Answers

## Don't hang up on me

I SEEM to be having problems with the printer port. When I power up to 0000H I get what appears to be the printer port in system memory up. This also occurs using LUCI. I am using a Paper Tiger carriage interface printer.

Does you tell me the correct address for the ports carriage and printer? Is the printer port a 1024H PA, 8" port?

B. Dees  
215 Southfield Drive  
Columbus  
Ohio 43214

the Dragonette or Utilities cartridge. However, don't try to use any other interface, such as the Cassette tape controller, as these will not work.

## I can't get no satisfaction

I HAVE been having trouble getting the commands GET and PUT to work. I have written a program which requires a user to move left and right across the screen, but I have been unable to achieve this. I have replaced the program and would be grateful if you could have a look at it and tell me what I'm doing wrong.

10 PRGRM1.LIB;SCREEN17.FICL

Stow, Lodge  
Roxbury  
Massachusetts 01783

THE GET and PUT commands seem to cause more than their fair share of trouble to those learning BASIC. The problem with this program is that line 40 is missing in the CG-9 statement. This is: 45=1047-1049 ROM ROM17.ROM;SCREEN17.ROM;SCREEN18.ROM

The reason stated that line 40 (which indicates full graphical status to be present) is required, but in practice it is usually wise to leave it, since the image displayed by PUT can be somewhat unpredictable. There is no need to GET an image more than once, so line 40 can be changed to 0000H.

11 F000 = .10 7440 10  
10 45=1047-1049 ROM ROM17.ROM;SCREEN17.ROM;SCREEN18.ROM;SCREEN19.ROM;SCREEN20.ROM

THE "EXTRA SPACES" message is generated when the memory lines are aligned in an legal addressed. For example, if you enter 233 (hex) when the last command reads INPUT A, this message will be displayed. In this case, when A is only a variable, and the program does not stop.

Unfortunately, this is not a bug, but is the expression of the logic contained in the memory in the memory location

# Four Dragon 64s to be won

CAN YOU FIND the two whole numbers which, when multiplied together will come to exactly 1 000 000? Easy? How about

ten squares, say ten 31 rectangles of card, make 2 x 1 inches in size. Is it possible to completely cover these ten rec-

the grid to have alternate squares shaded like a chessboard. If this is done, the two missing squares will be both of the same colour either white or black. Now a 2 x 1 card can only cover one square of each colour however it is placed, and since thirty of them have been positioned, the next uncovered square will be of the same colour, and so cannot both be covered by the remaining card.

Now let's return to our original problem. We have seen how two factors of 100 can be found neither containing any zeros. Are there any other powers of ten that can be similarly expressed? Ten itself has factors of 2 and 5, and one hundred has factors of 4 and 25. In each case these factors are found by simply multiplying 2 and 5 to the corresponding power to which we have raised the 10. The results are shown below:

10 <sup>0</sup> = 1	10 <sup>1</sup> = 10	10 <sup>2</sup> = 100
10 <sup>3</sup> = 1000	10 <sup>4</sup> = 10000	10 <sup>5</sup> = 100000
10 <sup>6</sup> = 1000000	10 <sup>7</sup> = 10000000	10 <sup>8</sup> = 100000000
10 <sup>9</sup> = 1000000000	10 <sup>10</sup> = 10000000000	10 <sup>11</sup> = 100000000000
10 <sup>12</sup> = 1000000000000		

Unfortunately 10<sup>12</sup> would be 1000000000000 which is a problem in terms of readability, and so 10<sup>12</sup> cannot be so factored.

This month's competition is to determine how many other powers of ten have two factors which do not contain zeros.

As a hint and to ease any suspicion right, it has been established by a competitor in America that all powers of 10 from 10<sup>12</sup> to 10<sup>100</sup> contain at least one zero, so we need only compare ourselves from two powers up to 100.

Solutions and the solution to the puzzle will be published in our July issue. Details will not be acknowledged and we cannot enter into correspondence on the results.

adding the stipulation that no other number must contain any zeros. This makes things a bit harder — or even you may think impossible. That is unless you happen to be upon a novel method of approach whenupon the solution becomes simple by itself.

One million is equivalent to 10<sup>6</sup> respect to the tenth power — that is 10<sup>10</sup>. Below 10<sup>10</sup> we find no factors of 10 and 1, plus three factors of 2 and 5, as well as 10<sup>7</sup> equals one million so two zeros (2 x 5<sup>6</sup>). This can also be written as 2<sup>1</sup> x 5<sup>6</sup> which works out as 64 times 15 625. Thus we arrive at our answer to two factors of one million, neither containing any zeros.

Puzzles of this type in which the solution is usually apparent but only if you fit them such a logical method have become known by the not altogether name of "she problems". It was for much the same reason that the concerned author James popular with mathematics enthusiasts such as Christopher Deam and his contemporaries were called "she-his". I am truly close to the expression of surprise when encountered for the first time.

There is another area of the mathematical kind. Draw an eight inch square, and rule it up into a grid of sixty-four one inch squares. Now cross out two diagonally opposite corner squares, so leaving only

ing squares with the dots?

If you want to try to solve this by logical experiments, you might find that your first few attempts failed. By the time that you had had a couple of dozen tries — also equally fruitless — you might reasonably suppose that the solution was difficult if not impossible. But how can it be proved? Of the millions of different ways in which the cards can be placed in there not one that will succeed in covering all the squares?

The answer is that it is impossible, and the solution is deceptively simple. Consider

## Prize

THIS MONTH COMPETITION is giving away four Dragon 64s to four lucky winners of this competition.

## Rules

To win a Dragon 64 you must both show the answer to the competition and try to solve it with the use of a BASIC program developed on your Dragon. Please do not generate a cassette containing the answer. As a reminder complete the following sentence in 15 words or less. I would like to own a 64 because

Your entry must arrive at Dragon User by the last working day of April. The

solutions and the solution to the puzzle will be published in our July issue. Details will not be acknowledged and we cannot enter into correspondence on the results.

## January winner

THE WINNERS of the discs stated in the February edition are (alphabetically): The 10 discos, who will each receive one disc each, are Curtis Barnes, Mr A. Carter of Wrexham, Kevin Darmatoff of Cardiff, Maria Lestrange of Penrith, Janice Parry of Wales, Gwyneth French of Northampton, J. Myers of Welling, T. Jolley of Stevenage, Dennis Winstanley of Teesside, J. Pritchard of Bridgend and C. Dore of Peterborough.

# RETURN OF THE RING

THE KING  
OF  
DARKNESS  
PART II

At last the saga  
continues ...

The Guardians of Shards  
is defeated, the Hell  
spawned hordes of the Evil  
Sorceress of Sorg, River  
Wraithness, wielder of the  
Four Mighty Rings, must  
face the greatest  
challenge, to return the  
Ring Of Darkness to its  
masters on the hidden  
planet Ringworld ...  
And somewhere at the  
ends of time the forces of  
evil are preparing their  
revenge.

After one year of  
development, Wintersoft  
are proud to present the  
most sophisticated game  
ever created for the  
Dragon 32. Within 100K, in  
real time scale, RETURN OF  
THE RING is an outstanding  
multi program blend of  
superb high resolution  
colour graphics and  
advanced routines that  
allow you to communicate  
with your computer in  
complete sentences. You  
will face challenges and  
adventure as you and your  
Ringworld  
companions travel a  
mysterious planet and  
face the dangers of an  
area strewn with  
dimensions of hellish muck.  
An epic adventure  
unrivalled for its wealth of  
detail and diversity.

May luck travel your  
path.

Please note: RETURN OF  
THE RING is a complete  
adventure. You need not  
buy THE RING OF  
DARKNESS to play it.

## Complete control at your fingertips

The smooth control of the Voltmace Delta spring return joystick is now available to Dragon owners. Each joystick has been individually tested before it leaves our factory, following extensive robot testing to prove the design (one model is more than a million moves). This means that not only will your joystick be strong, tough and reliable, but it ensures long life, accurate control and with the choice of red or green.

Five buttons,  
great instant  
recognition  
between the  
left and right  
joysticks.

If you are  
not completely  
satisfied with the  
Delta 3d, return it  
to us within seven  
days for a full refund.

Made in England
